

Hunters Element Acclimate Mid-Layer Top

Brand: Hunters Element • Category: Apparel & Field Gear

Overview

A mid-layer is the warm layer you wear between your shirt and your jacket — or on its own once the day warms up. This one uses Primaloft insulation (warm for its weight, and still warm if it gets damp) in a light, tough ripstop shell, so it takes the bite off a cold goldfields morning without bulking you up while you swing the coil.

Key features

- ✓ Warm insulated layer for cold-morning starts
- ✓ Light and low-bulk — wear it under a jacket or on its own
- ✓ Primaloft insulation in a tough ripstop shell
- ✓ Sizes S–4XL
