

10x Jeweller's Loupe

Brand: Deep Lead • Category: Gold Panning & Prospecting

Overview

A loupe is a small, powerful magnifying glass that folds into its own metal case so it lives in your pocket. This one magnifies 10 times, which is enough to check whether a speck is real gold or 'fool's gold' (iron pyrites, which glitters but is worthless), and to look closely at flakes, specimens and the tiny hallmarks stamped on jewellery. The 'triplet' lens uses three bonded pieces of glass so the view stays sharp and true to colour right to the edges.

Key features

- ✓ A small fold-away magnifying glass (loupe) that fits in your pocket
- ✓ 10x magnification, enough to tell real gold from glittery 'fool's gold'
- ✓ Triplet lens (three bonded glass layers) for a sharp, colour-true view
- ✓ Inspects gold flakes, specimens, coins and jewellery hallmarks; no batteries needed

Specifications

Magnification	10x
Lens diameter	18 mm
Lens type	Triplet - 3 bonded glass elements, achromatic & aplanatic (colour- & edge-distortion corrected)
Focal / working distance	~25 mm (1 in) from lens to subject
Field of view	~20 mm across
Illumination	None - no batteries required
Body	Folding metal housing; lens swings into a protective cover
Case	Soft protective pouch included
Weight	~30 g
Folded size	approx. 40 x 25 x 18 mm
Colour	Black
Best for	Inspecting gold, gemstones, coins & hallmarks
