

Plastic Prospecting Sand Scoop

Brand: Deep Lead • Category: Digging & Recovery Tools

Overview

A sand scoop is a small hand shovel for digging and sifting on loose ground: you scoop up the sand around your find, then let the loose sand sift away so the coin, ring or bit of gold is left sitting in the scoop. This one is moulded from tough plastic, so it's light on the arm all day and won't rust in salt water or wet sand. Because it's non-metallic, you can pass your detector or pinpointer straight over a scoopful without it setting off a false beep — handy for telling exactly when your find is in the scoop. Ideal for beaches and creek banks.

Key features

- ✓ A light plastic hand scoop for digging and sifting in sand and soft soil
- ✓ Scoop, then sift the loose sand away so your find stays in the scoop
- ✓ Non-metallic, so your detector or pinpointer won't beep on the scoop itself
- ✓ Tough and rust-proof — great on beaches and creek banks, and easy on the arm

Specifications

Type	Hand-held prospecting sand scoop / trowel
Material	One-piece moulded heavy-duty plastic (polypropylene-type)
Construction	Single-piece, reinforced — no seams or joins to fail
Non-metallic	Yes — pinpoint finds in the scoop without false signals
Overall length	~32 cm (12.5")
Weight	~100 g (3.5 oz)
Colour	High-visibility green (supplied colour may vary)
Digging edge	Bevelled leading edge to cut into sand and gravel
Riffles	Moulded internal riffles to trap and check for gold
Carry	Moulded lanyard hole in handle for belt/pack tether
Corrosion resistance	Rust- and corrosion-free; safe in salt water and wet sand
Best for	Beach, dry/wet sand, gold panning and shallow-water recovery
