

Stackable Sieve Set

Brand: Deep Lead • Category: Gold Panning & Prospecting

Overview

This is a set of three sieves that stack inside each other, each with a different size of holes, coarse, medium and fine. A sieve screens the rocks and gravel out of your dirt so only the finer material where the gold hides is left. With three sizes stacked together you can sort a load of creek dirt into sizes in one pass, which is faster than a single sieve and leaves less to work through in the pan.

Key features

- ✓ A set of three sieves with different hole sizes (coarse, medium, fine)
- ✓ They stack inside each other to sort dirt into sizes in one pass
- ✓ Screens rocks and gravel out so only the fine, gold-bearing material is left
- ✓ Sits over a standard gold pan or bucket

Specifications

Type	Stackable classifying sieve set (sizes paydirt before panning)
Set contents	3 nesting sieves — coarse, medium, fine grades
Mesh sizes	Approx. 8 mm / 4 mm / 2 mm square mesh (coarse/medium/fine)
Diameter	Approx. 330 mm (13 in)
Frame material	Aluminium rim
Mesh material	Woven steel / stainless steel mesh (rust resistant)
Rim depth	Approx. 50 mm per sieve
Stacking	Nest and stack together for storage and staged classifying
Fits over	Sits over a standard gold pan or 20 L / 5-gal bucket
Use	Screens out oversize rock and gravel, concentrating fines where gold sits
Set weight	Approx. 1 kg
Colour	Natural aluminium / silver
