

Stainless Steel Sand Scoop

Brand: Deep Lead • Category: Digging & Recovery Tools

Overview

A sand scoop is a metal basket-shovel for beach and shallow-water detecting: scoop up the sand around your find and give it a shake, and the loose sand falls out through the holes while the coin, ring or nugget stays behind. This one is made from thick marine-grade stainless steel, so it clears sand fast and won't rust — a heavier, buy-once tool that far outlasts a plastic scoop. The socket takes a long handle (sold separately) if you'd rather sift standing up than bent over.

Key features

- ✓ A holed metal scoop for sifting finds out of sand at the beach or in shallow water
- ✓ Scoop and shake — sand falls through the holes, leaving coins, rings and nuggets behind
- ✓ Thick marine-grade (304) stainless steel — rust-proof and built to last
- ✓ Socket fits a long handle (sold separately) so you can sift without bending over

Specifications

Type	Sand scoop for beach & shallow-water metal detecting / prospecting
Material	Stainless steel (marine/304-type grade, saltwater & rust resistant)
Construction	~2 mm stainless plate, welded/riveted basket, high-polish finish
Hole pattern	~10 mm holes (hex or round) for fast wet & dry sand sifting
Basket size (L x W x D)	approx. 320 x 180 x 100 mm
Weight (scoop head)	approx. 1.3 kg
Handle fitting	Welded collar/socket to accept a long pole (pole may be sold separately)
Retains	Clears sand fast while holding coins, rings and gold nuggets
Best for	Dry sand, wet sand and shallow water at the beach or river
Care	Rinse in fresh water after saltwater use; will not rust
