

Gold Crevice Suction Tool

Brand: Deep Lead • Category: Gold Panning & Prospecting

Overview

Suck fine gold straight out of cracks, bedrock crevices and underwater, where a snuffer bottle can't reach. Squeeze the bulb, place the metal tip on the gold, and release to draw it up.

Key features

- ✓ Rigid metal tip gets into cracks and bedrock crevices
- ✓ Squeeze-bulb suction draws fine gold clear of the water
- ✓ Wrist lanyard so you won't lose it in the water

Specifications

Type	Squeeze-bulb crevice sniffer (hand-operated gold suction tool)
Use	Sucks fine gold from bedrock cracks, crevices, pan corners & sluice-mat grooves – wet or dry
Overall length	~30 cm (approx. 12")
Bulb	Heavy-duty flexible rubber squeeze bulb
Suction tube	Rigid tube ~8 mm (5/16") OD, angled tip (approx. 22° cut) to reach into cracks
Max material size	Lifts particles up to ~6 mm (1/4") diameter
Collection capacity	~60 ml (2 oz)
Chamber	Clear body on see-through variants – view recovered gold without emptying
Underwater use	Suitable for diving/snorkelling crevice sniping (flood dry crevices, then suck)
Tether	Wrist lanyard included to prevent loss in water
Weight	Light – approx. 50–80 g
Colour	Typically black rubber bulb with clear/black tube
